

OUR MISSION

Scipher Medicine® is a precision immunology company on a mission to match each patient with their most effective therapy to improve health outcomes.

THE CHALLENGE

The treatment pathway for patients with autoimmune diseases is broken. It lacks precision and personalization, is plagued by inefficient trial and error and fail first requirements, and it harms the entire health care system clinically and financially. It is one of the biggest challenges in health care today.

225 Million Patients

are prescribed medications for their conditions that they don't respond to

\$552 Billion

is wasted annually across the health care system as a result

Autoimmune Disease

is one of the largest contributors to this wasteful spend

We believe there is a better way.

OUR SPECTRA PLATFORM

We created a powerful and proprietary platform combining the mapping of interactions between more than 19,000 proteins in the human cell, one of the largest molecular data registries in autoimmune disease, and unique AI network science algorithms to create solutions that help patients with autoimmune disease.

OUR SOLUTIONS

DIAGNOSTICS: We bring precision medicine to patients with autoimmune diseases through blood tests that reveal a person's unique molecular disease signature and match it to the most effective existing therapy. Our first blood test, PrismRA®, predicts patient response to TNFi drugs for rheumatoid arthritis. We intend to launch additional tests for autoimmune diseases, including ulcerative colitis, Chron's disease, and multiple sclerosis.

THERAPEUTICS: Molecular and clinical data generated from our tests and analyzed by our Spectra platform fuels our development of a class of new targeted therapeutics. Scipher is advancing a pipeline of novel targets and assets in various phases of preclinical validation.

BACKED BY LEADING INVESTORS

LAUNCHED

2015

HEADQUARTERS

Waltham, MA with NC & UT locations

EMPLOYEES

130+

LEADERSHIP

Alif Saleh Chief Executive Officer

Sam Asgarian, MD Chief Medical Officer

Sam Davis General Counsel

Alison Stowell Chief People Officer

Slava Akmaev, PhD Chief Technology Officer

Andy Long Senior Vice President of Therapeutics

ADVISORY BOARD

Regina Benjamin, MD 18th Surgeon General of the United States

Richard Blackburn CEO, Azurity Pharmaceuticals; Former Pfizer Global President for Inflammation & Immunology

Mariann Byerwalter Chairman Emeritus, SRI Intl Board of Directors, Pacific Life

Michael J Elliott, PhD Former Senior Vice President of Immunology, Janssen Pharmaceuticals
